

Addendum Questions and Answers

RFB 2019-09

- 1. Can we assume the physical/chemical properties in the deep water sediments are homogeneous throughout the 9 + deep areas?**

Page 2-18 and 2-19 contain table 2-9 describing the general physical characteristics of sediment at each collection site and page 2-29 contains table 2-11 describing general chemical characteristics associated with the top 10 cm of sediment at each collection site.

Figure 2-5 and 2-8 show water depth contours and sediment core samples, respectively. If your plan of work is assuming physical and chemical properties are homogeneous throughout lake depths exceeding 9 feet, please provide your reasoning and let it be known to reviewers this is the assumption you used in making your response to the bid.
